

**LACTIC ACID BASED  
TEAT DIP SOLUTION WITH  
NATURAL FILM BARRIER**

# DERMO HERBALBAR

- Prevent cracks and chaps formation on teats
- Film forming on teats
- Broad spectrum anti-microbial activity
- Contains lanolin & glycerin for emollient action
- Green color with specific odor

**DERMO HERBALBAR** is lactic acid-based teat dip with natural film forming barrier on teat. It has green color with specific odor. It is used for post-milking application in dairy animals.

#### **COMPOSITION:**

DERMO HERBALBAR contains lactic acid, Glycerin, Lanolin & vegetable oil. Lactic acid provide coverage against microbes while lanolin, Glycerin & vegetable oils act as emollient and conditioner for teat skin.

#### **DESCRIPTION/INDICATIONS:**

DERMO HERBALBAR is ready teat dip solution as a teat and skin care product. It is designed to provide biocidal and barrier protection of teats after milking. It removes the dead peel due to lactic acid, glycerin, lanolin, and other excipients which it contained and gives softener and moisten effect on the skin. It makes a thin layer to the skin. Because of that, it protects the teat from the external effect that will cause mastitis. By forming a protective film over the teats & keeping them hydrated DERMAL HERBALBAR stops the bacteria, fungi & virus from colonizing on the teat surface. It supports the milking performance by preventing skin irritation and chaps which can occur during the milking process. It speeds up the regeneration of the cells and it regulates the skin moisture. The film/barrier is easily removed with water or towel before the next milking.

#### **ANTIMICROBIAL EFFICACY:**

DERMO HERBALBAR qualify

**EN 1656:2000** (Test for the evaluation of **antibacterial activity** of antiseptics & disinfectants used in veterinary field)

**EN1657:2016** (Test for the evaluation of **fungicidal & yeasticidal** activity of antiseptics & disinfectants used in veterinary field)

**EN 14657** ((Test for the evaluation of **antiviral activity** of antiseptics & disinfectants used in veterinary field)

According to these tests DERMAL HERBALBAR gives **99.999%** protection against following microbes which are the frequent cause of mastitis in dairy.

- *Escherichia coli*
- *Staphylococcus Aureus*
- *Streptococcus uberis*
- *Streptococcus agalactiae*
- *Streptococcus dysgalactiae*
- *Candida Albicans*
- *Aspergillus Niger*
- *Bovine Enterovirus*

#### **DIRECTIONS FOR APPLICATION:**

DERMO HERBALBAR is applied as dipping to the teat with suitable dipping material by adding the product directly (with no dilution) in it after each milking process. Fill the dipping cup by two third and ensure that entire surface of teat is covered with the dip. Provide the cows to stand up for at least 15minutes after the application.

#### **WARNINGS:**

Keep away from foodstuffs. Store in places that out of reach of children. Do not apply to eyes, ears, mouth, and nose. Wash your hand after application.

#### **PACK SIZE:**

Available in 20 L can.
